Location

More than a call for action, the AMA Project is a platform that involves and gather people who believe and want to take hands on actions. This group of Brazilian youth built a new school structure in a community of Zango 3, in Luanda, to face the violation of human rights that community lives in the daily basis.

After the very first visit and witnessing the terrible situation the children had been living during the school time, this young group decided to build a school to improve the education structure in that community. Within five days - from the first visit and the date to come back to their home town - they could build a school that brought dignity to the students.

Impact:
joy and hope;
play of light and shadow; stimulating architecture.

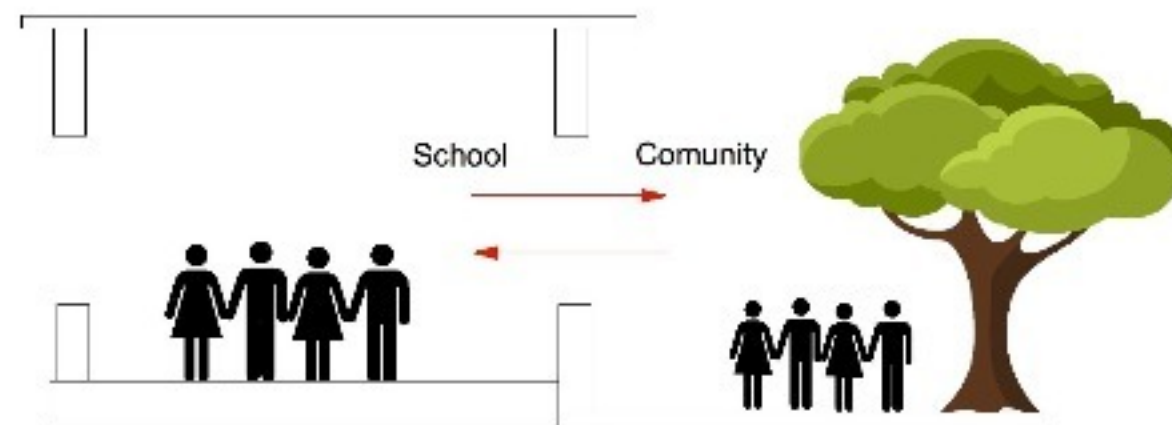

Following the community architecture standards, the initiative decided to set up a new structure using the materials from the community market. Integration and solidarity was the key point to face the violation of human rights this community has been facing.

The panel and the whole structure was thought to improve the well being of the students and the teacher.

The tables and benches in "U" gives to the teacher the possibility to be closer to the students.
